

Determining Cycle Count on the HBH650

- Plug in the machine and turn it upside down on a table or counter.
- Use the power switch to turn the machine on.
- Look inside the machine through the air vents on the bottom of the machine for the flashing LED lights on the bottom of the PC Board.
- Once you have found the flashing lights turn the machine off and back on again with the power switch.
- This time count the flashing lights inside the machine.
- You could have Red, Yellow, and Green lights.
- Count how many flashes of each color. If you don't get a color, that space is a zero.
- Write the numbers down as you count.
- Example:
 - 1 red, 6 yellow, 4 green
 - The number is 164 add 2 zeros. The total cycle count is 16,400 cycles.
